Education

The Chinese University of Hong Kong August 2022 - Present

Bachelor of Engineering in Artificial Intelligence: System and Technologies

Expected Graduation Date: July 2026

Skills

- **AI/ML:** Deep Learning, Computer Vision, Model Fine-tuning, Data Augmentation, RAG
- **Frameworks & Libraries:** PyTorch, OpenCV
- **Programming:** Python, C/C++, JavaScript
- **Software Engineering:** Fast APIs, Git, Linux, Node.js, React

Work Experience

iASPEC Service Limited

Software Engineer Intern (Summer) June 2025 – August 2025

- Developed core components of an AI-powered automated testing platform, incorporating machine learning techniques to enhance defect detection
- Collaborated with senior engineers to design and implement scalable backend functionalities supporting AI-driven workflows
- Contributed 300+ commits to the production codebase, including feature development, debugging, and performance optimization

Academic Projects

LLM Hallucination Detection and Mitigation with Zero-Shot methods

Final Year Project September 2025 – May 2026

- Developed a zero-shot hallucination detection framework leveraging LLM-based signals for factuality assessment
- Designed and evaluated detection strategies without supervised training data
- Conducted experiments to analyze model reliability and hallucination patterns

GTA V ALPR (Automatic License Plate Recognition)

Foundation of applied deep learning November 2025

- Built a YOLO-based detection and OCR pipeline using PyTorch and OpenCV
- Created and annotated a 1,200+ image dataset with augmentation to improve robustness
- Developed an end-to-end inference pipeline for detection and recognition under varying conditions
