Education

The Chinese University of Hong Kong

Aug 2022 – Jul 2026

Bachelor of Engineering in Artificial Intelligence: System and Technologies

Department of Computer Science and Engineering

Skills

- **Programming:** Python, Java, JavaScript/Typescript, C/C++, SQL
- **Machine Learning:** PyTorch, , scikit-learn, Hugging Face, Neural Networks, Deep Learning
- **Computer Vision:** OpenCV, YOLO, Object Detection, Image Processing, Tracking
- **Generative AI:** LLMs, RAG, Prompt Engineering, LangChain, LangGraph, Vector Databases
- **Data / Analytics:** NumPy, Pandas, Matplotlib, SQL, PostgreSQL, Tableau
- **Software Engineering:** FastAPI, RESTful APIs, Git, Docker, Linux, Cursor, Codex, React
- **Language Skills:** Cantonese (Professional), Mandarin (Professional), English (Business Level)

Work Experience

Hong Kong Productivity Council

Program Trainee — APAS, Green Transportation Unit

Sep 2026 – Present

- Contributed to the Driving Copilot autonomous driving project, supporting data cleaning and preprocessing for AI-driving.
- Performed data cleaning and preprocessing to improve dataset quality and consistency for autonomous driving applications.

iASPEC Service Limited

Software Engineer Intern

Jun 2025 – Aug 2025

- Developed frontend features for an AI-powered software testing SaaS platform using React and Tailwind CSS.
- Implemented FastAPI endpoints and business logic for AI-assisted test generation and testing workflows.
- Contributed ~300 commits across features development, bug fixes, and optimizations during the development lifecycle.

Selected Projects

LLM Hallucination Detection and Mitigation with Zero-Shot methods

- Developed a zero-shot framework for detecting LLM hallucinations in RAG scenarios without supervised training data.
- Designed and evaluated multiple detection strategies across different LLM/RAG configurations to analyze reliability and hallucination patterns.
- Achieved comparable detection performance to judge-based baselines while requiring much lower computational cost.

GTA V ALPR (Automatic License Plate Recognition)

- Built a YOLO-based ALPR pipeline using PyTorch and OpenCV, for both detection and recognition
- Created and annotated a 1,200+ image dataset across 4 conditions and trained a YOLO-based ALPR pipeline.
- Improved detection mAP from 77% to 93% through data augmentation and class balancing.
- Achieved 80% for detection and recognition accuracy under varying conditions.
